📊 AR Solutions – Sales & Customer Insights Dashboard (Power BI)

🔍 Project Overview

This project is a **data-driven sales analytics dashboard** built using **Power BI**, based on a structured Excel dataset containing transactional records of mobile sales across multiple cities.

The dataset includes:

- Transaction details
- Customer demographics
- Product (brand & model) data
- Payment methods
- Customer ratings

The goal of this project is to convert raw business data into **interactive visual insights** that support **strategic decision-making** in sales, marketing, and customer experience.

🗂 Dataset Description

The dataset consists of the following key fields:

- **Transaction ID** – Unique identifier
- **Purchase Date & Day Name** – Time-based analysis
- **City** – Sales geography
- **Brand & Mobile Model** – Product segmentation
- **Units Sold & Price Per Unit** – Revenue calculation
- **Customer Age** – Demographic analysis
- **Payment Method** – Transaction behavior
- **Customer Ratings** – Satisfaction metric

📊 Key Metrics (Derived from Data)

- 💰 **Total Revenue:** ₹76.9 Crore+
- 📦 **Total Units Sold:** 19,150

- 🏙 **Top Performing City:** Delhi
- 📱 **Top Selling Brand:** Apple
- 💳 **Most Used Payment Method:** UPI
- ☆ **Average Customer Rating:** 3.69 / 5

📊 Detailed Analysis & Insights

🏙 1. City-wise Sales Performance

- **Delhi** leads significantly with the highest units sold (~5000+ units)
- Followed by **Mumbai** (~3200+ units)
- Tier-2 cities like **Ranchi, Chennai, and Jodhpur** show moderate sales

📌 **Insight:**
Metro cities dominate revenue, but Tier-2 cities represent **untapped growth potential**

📱 2. Brand Performance Analysis

Units sold across brands are highly competitive:

- Apple – 3932 units
- Samsung – 3923 units
- OnePlus – 3830 units
- Vivo – 3801 units
- Xiaomi – 3664 units

📌 **Insight:**

- Market is **highly competitive with no single monopoly**
- Premium + mid-range brands perform almost equally
- Suggests **diverse customer preferences**

💳 3. Payment Method Trends

- **UPI** is the most preferred payment method

- Followed closely by:
    - Debit Card
    - Credit Card
    - Cash

📌 **Insight:**

- Strong shift toward **digital payments**
- Indicates increasing trust in **cashless economy**

☆ 4. Customer Satisfaction Analysis

Ratings distribution:

- 5☆ → Highest (1488 customers)
- 4☆ → Strong (843 customers)
- Lower ratings (1–2☆) exist but are limited

📌 **Insight:**

- Overall customer satisfaction is **above average**
- Average rating: **3.69**
- Improvement opportunity exists in **service or product experience**

📅 5. Time-Based Trends

- Data includes **day-wise purchase behaviour**
- Enables analysis like:
    - Peak sales days
    - Weekend vs weekday performance

📌 **Insight:**

- Businesses can optimize **marketing campaigns & offers** based on high-performing days

---

👥 6. Customer Insights

- Dataset includes **age-based segmentation**
- Can be used to:
  - Identify target demographics
  - Personalize marketing strategies

📌 **Insight:**

- Enables **customer-centric decision making**

📈 Business Insights & Recommendations

🚀 Growth Opportunities

- Expand focus on **Tier-2 cities**
- Increase marketing in **moderate-performing regions**

💡 Strategy Improvements

- Improve **low-rating areas** (after-sales service, product quality)
- Introduce **loyalty programs** for repeat customers

💳 Payment Optimization

- Promote **UPI offers & cashback strategies**
- Partner with fintech platforms

📦 Product Strategy

- Maintain a **balanced portfolio** (premium + budget devices)
- Focus on **high-demand brands**

🛠 Tools & Technologies Used

- **Power BI** – Dashboard & visualization
- **Microsoft Excel** – Data source
- **DAX** – Measures and KPIs
- **Data Cleaning & Transformation** – Preprocessing

🚀 Conclusion

This project demonstrates how raw transactional data can be transformed into **meaningful business insights** using Power BI.

The dashboard helps stakeholders:

- Monitor sales performance
- Understand customer behavior
- Identify growth opportunities
- Make **data-driven decisions**
